

Compact Tray Washer

FEATURES

- Cleans all types of trays and rafts
- Manual loading and unloading
- Space Saving Design
- Variable belt speed control
- Integrated filtration systems
- Feed rate: up to 12" per second
- Easy to clean designed
- UVC germicidal technology
- No chemicals required
- Water and energy efficient design

Food safety is one of our top priorities. Let us help you protect your greenhouse!

The Compact Tray Washer is your all-in-one tray/raft sanitization system. The space saving design features three unique stages - Washing, Drying, and Sanitizing. In just seconds, it will take recently harvested trays and make them plant-ready, keeping your facility operating at maximum efficiency. The Compact Triple Washer gives you increased energy and water savings over cleaning trays by hand, as well as being environmentally friendly and chemical free.

This system is recommended for growers who up to 500 trays / rafts a day.

Washing Stage

All trays / rafts undergo a film removal by high pressure washing.

Built in water recovery design during the washing and drying stages means substantial water savings for your business.

Drying Stage

Air knives dry the trays / rafts using a continuous flow of air from all sides as they pass through this section.

The specialized air knives give you added energy savings over traditional compressor-based systems.

Sanitization Stage

Uses UVC germicidal technology to quickly sanitize your trays / rafts without the use of harsh chemicals. UVC has been proven to eliminate weed seeds, soil insects, saprophytic and plant pathogenic fungi, as well as *E. coli*, *Salmonella*, and *Listeria*.

Model	Tray Size	Farming Type	Dimensions	Footprint
CTW30	Up to 30" tall 3.5" wide	Greenhouse Hydroponics Aquaponics	Length: 141" Width*: 65.5" Height: 74.2"	64.15 sq. ft

**additional clearance required to open doors and for cleaning.*
