

Standard Harvester

Our Standard Harvester is the cutting edge solution for medium to large scale growers who are looking to add automation and efficiency to their micro and baby greens harvesting.

The Harvester provides a fast, consistent and clean cut with no bruising or tearing; allowing your harvested greens stay fresh and increases their shelf life. This machine works with all types micro and baby greens and grasses, while increasing productivity and added cost savings for your business. It is ergonomically designed, and can be customized with PLCs and HMIs for pre-programmed settings.

We recommend this size harvester for growers who are harvesting 750+ trays a day.
